

Manisha Vyas

Question:

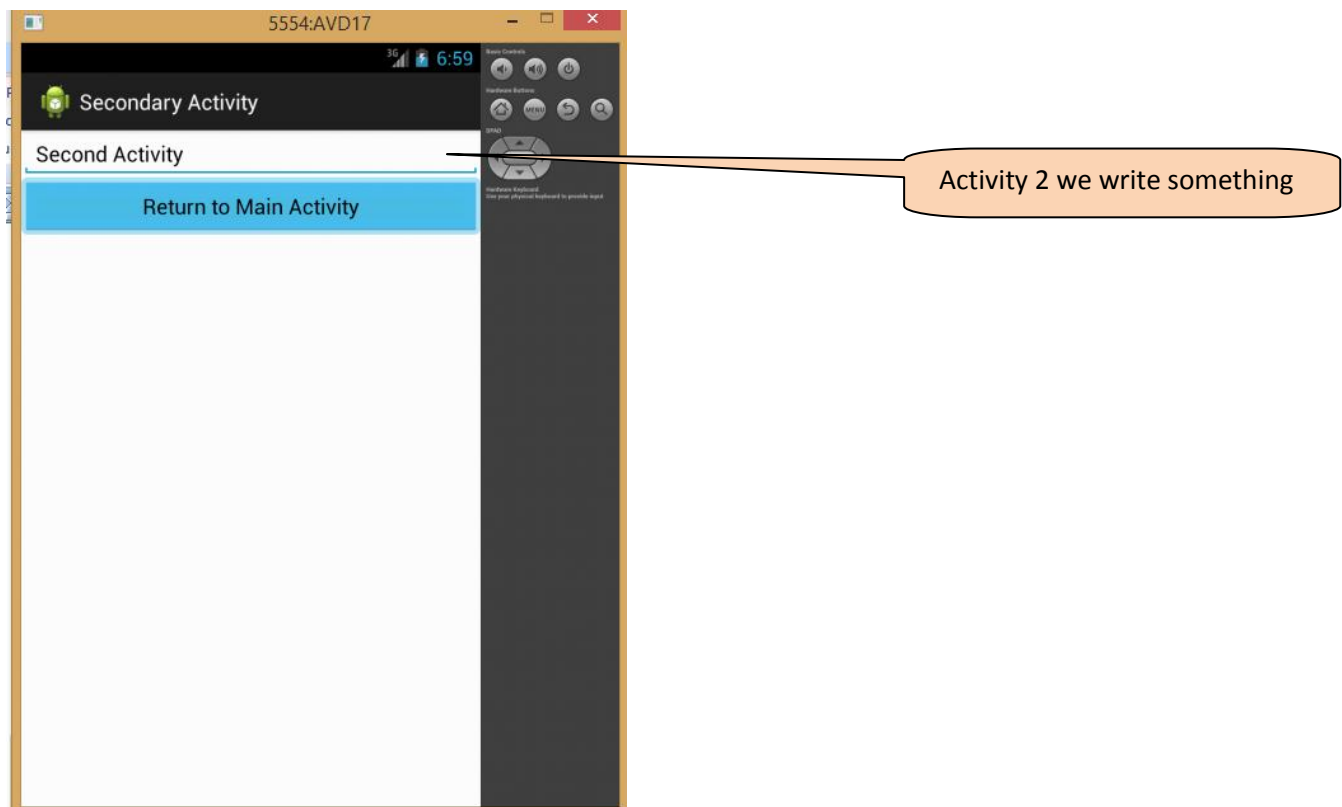

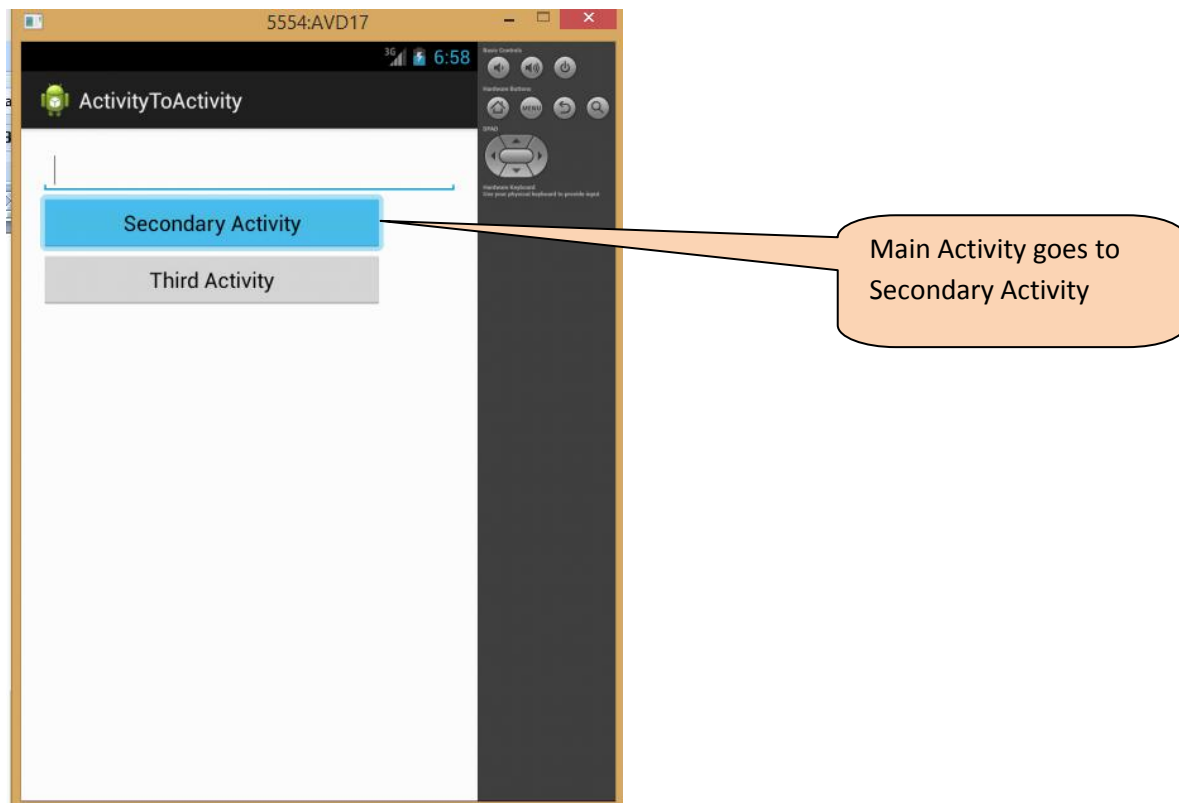

Activity to Activity

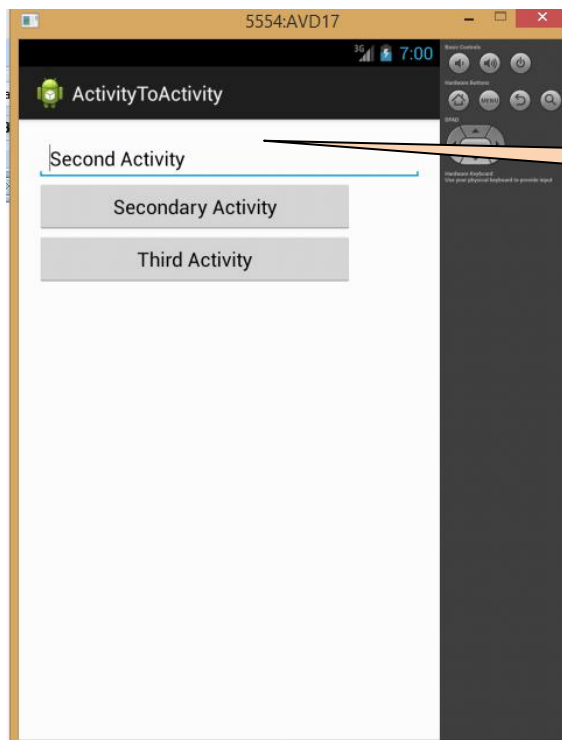

Create an application with the following features:

- A. On start the application shows the main screen (MAIN ACTIVITY) with 2 buttons and an EditText.
 - a. Button1 is named "Click To Secondary Activity". If the button is pressed Screen2 (SECONDARY ACTIVITY) is displayed.
 - b. Button2 is named "Click To Third Activity". If the button is pressed Screen3 (THIRD ACTIVITY) is displayed.
- B. On clicking Button1 (i.e., the button named "Click To Secondary Activity")
 - a. Launch another screen (using another activity) named Screen2 (SECONDARY ACTIVITY) which
 - 1. has one button named "Click To Return to Main Activity". Pressing the button will go back to the main screen (MAIN ACTIVITY).
 - 2. has an EditText for the users to enter data.

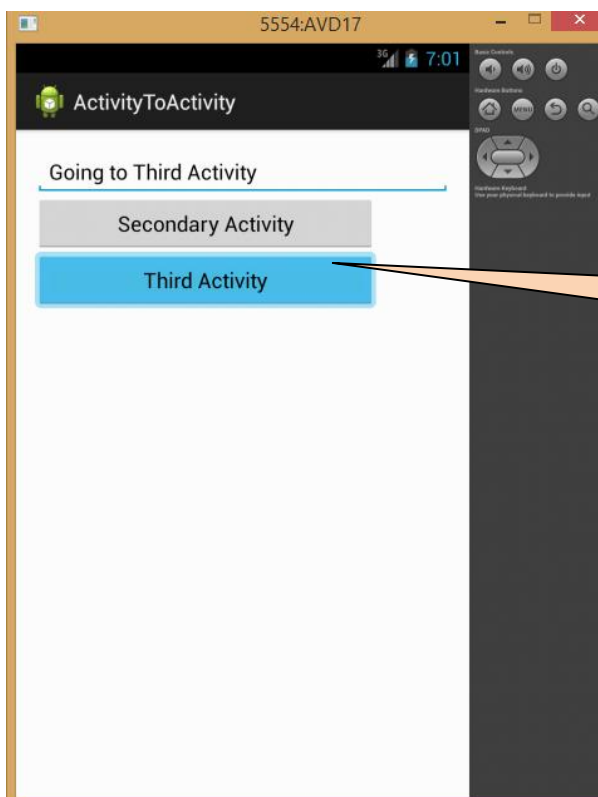

We will be mainly working with :
Three Activity
and its three XML

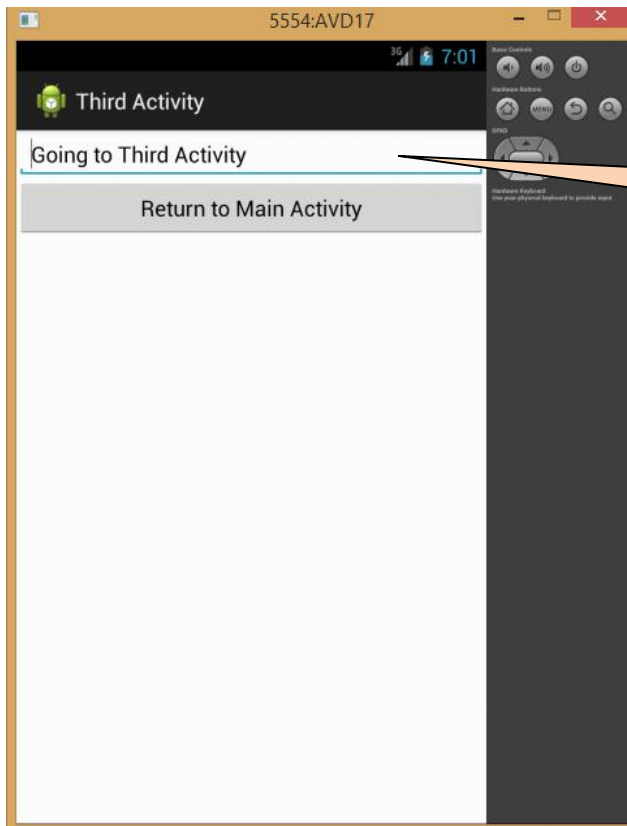

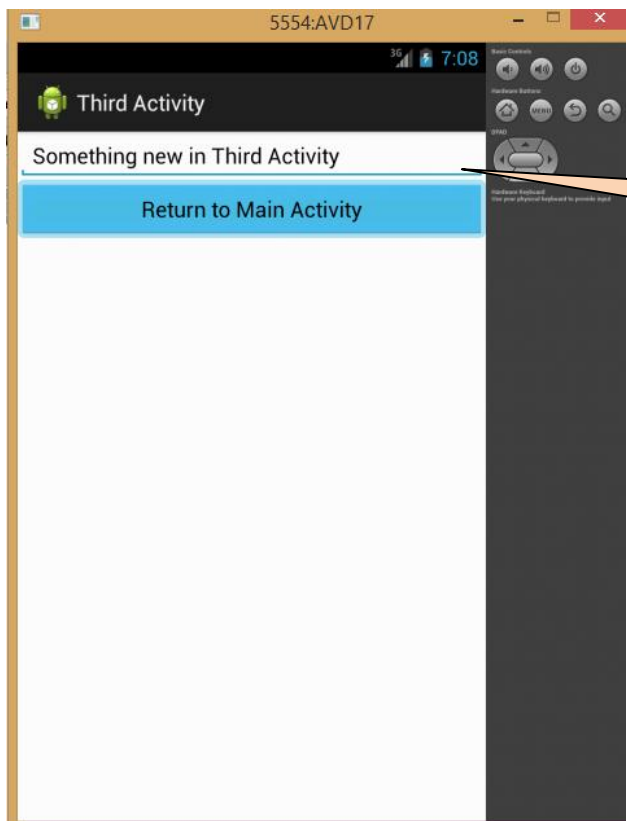

Same Text prints in main activityv EditText box

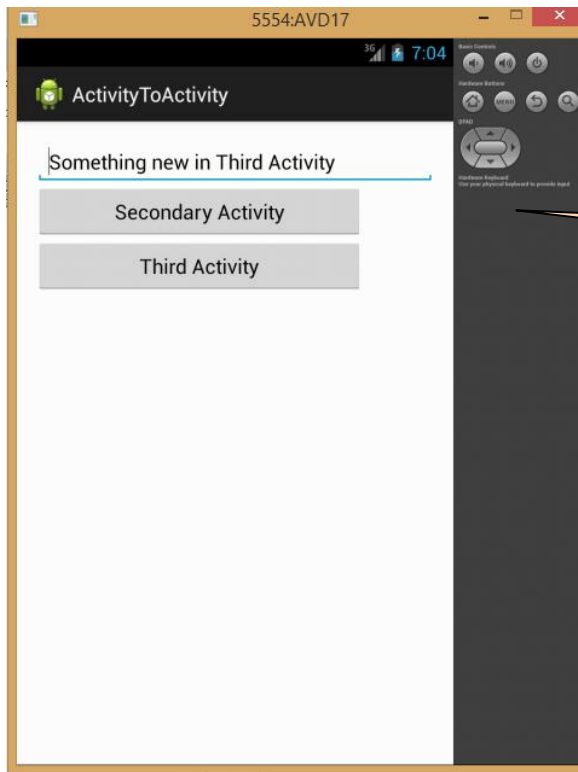

Change Some Text in Main Activity and press ThirdActivity Button

Third Activity EditText
Open with the same
Text as main Activity.

If we change Text
inside Third Activity
and returns back to
main Activity.

We have the same text what we entered into ThirdActivity

AndroidManifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.example.activitytoactivity"
    android:versionCode="1"
    android:versionName="1.0" >

    <uses-sdk
        android:minSdkVersion="8"
        android:targetSdkVersion="18" />

    <application
        android:allowBackup="true"
        android:icon="@drawable/ic_launcher"
        android:label="@string/app_name"
        android:theme="@style/AppTheme" >
        <activity
            android:name="com.example.activitytoactivity.MainActivity"
            android:label="@string/app_name" >
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />
                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
```

```

        <activity
            android:name=".SecondaryActivity"
            android:label="@string/sec_name">
        </activity>
        <activity
            android:name=".ThirdActivity"
            android:label="@string/third_name">
        </activity>
    </application>

</manifest>

```

//MainActivity.java

```

package com.example.activitytoactivity;
